

NEW!! VISCA CONTROL , Series 2008

SONY EVI D70

RZ30/RZ25

SONY EVI D100

As an update to our successful panells now we offer this modell with advanced features. The current modell still will be produced as a BASIC version.

**New Features:**

Manual Focus adjustment

Manual DAY/NIGHT switch

White Ballance adjustment

DISPLAY ON/OFF

Camera indicator for DAISY CHAIN operation

Like the BASIC version you also have 6 PRESET switches, RS422 and RS232 output and stepless speedcontrol

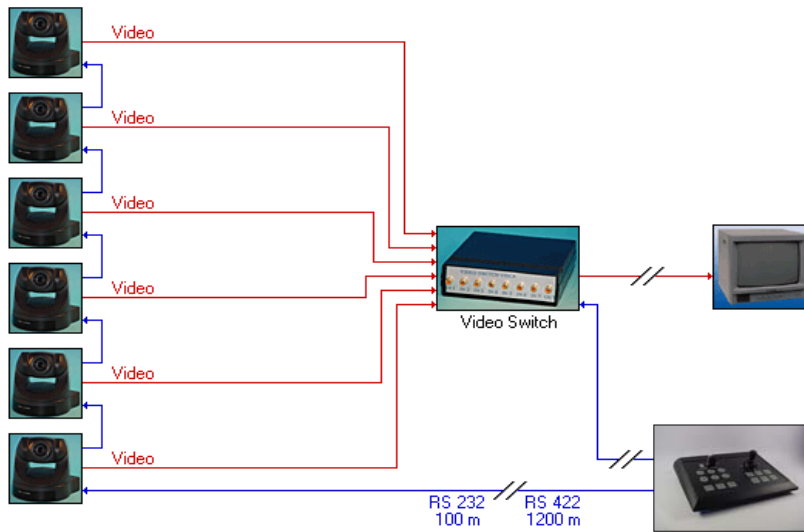

Our new advanced PTZ control consol can be deliverd in two versions.

STANDARD with DAISY CHAIN control ( up to 6 cameras)

or STARNET.(up to 12 or more cameras)

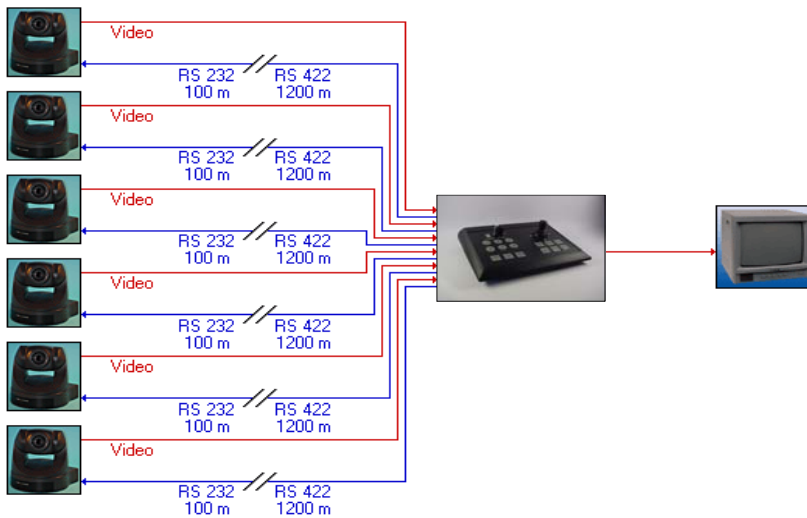

This makes you more flexible to choose a panel for your belongings.

## DAISY CHAIN

The classic option for controlling up to 6 cameras is the DAISY CHAIN wiring. The control signal (RS232 or RS422) goes from on camera to the next. The cameras will be selected with the "SELECT" switch on the panel. If you want to select also the video signal you have to use our VIDEOSWITCH. The box will select the videosignals synchronous to the control selection. The Videoswitch is an optional accessory .

## Starnet

Wiring with STARNET means, that you connect every camera directly to the control consol. The RS232/RS422 signals and videosignal of every camera goes to the panel. With an additional switch on the panel you can select the control and the videosignal at once. Because you need more connectors on the back, the design from the panel gets bigger, even when you connect more than 3 cameras. Below you see some samples. We can built the control consol in your design
